What is RDAO

RDAO is the [RChain DAO](#). The extraordinary thing about The DAO is that no single entity owns it, and it has no conventional management structure or board of directors. RDAO is a decentralized governance platform token made for the [RChain](#) community. It is currently built on Ethereum's platform and used as ERC-20, but in the future when RChain's mainnet is more mature, it will move to RChain. All of our governance will be placed on the chain to ensure they are tamper-proof, open and transparent.

We will work on exploring more and more ways to play with DAO and will have more and more complete tools. RDAO should be like a chameleon with the best environmental adaptability and always the most agile response to the situation at hand. We will always learn from history as lessons to keep learning and growing, and put the right tools in the right places. We promise to always listen to the valuable opinions of all people, and we promise to always provide equal opportunities for all. Welcome to the RDAO family!

How to use RDAO

★ Our Ethereum token contract is 0xc8754e609cb35c1d04d50734761bec38b7da9278
  ○ It can be checked in
    https://etherscan.io/token/0xc8754e609cb35c1d04d50734761bec38b7da9278
★ Our RDAO tool are available in https://snapshot.org/#/rchaindao.eth
  ○ As long as you have RDAO tokens, you are free to post proposals and vote in the RDAO tool. Everything is free, it doesn't cost you any gas or token fees.
  ○ All governance results are published on snapshot.org and will eventually be stored on RChain.

Why Create RDAO

I.   People must make the effort to join a cooperative membership. And some people are reluctant to fill out a KYC form, for fear their privacy will be compromised.
II.   Most of the time people can only vote during the annual meeting each year.
III. People don't get a percentage of the voting power based on the amount of money they invest or the amount of effort they put in.

IV. No one seems to keep track of the many suggestions that are introduced, and the number of people that are in favor and against these suggestions, after each member's presentation. This lack of accountability usually leads to people's words just being spoken and dissipating in the air.

V. There is no blockchain to record the discussions and governance that people want to initiate and participate in. How can a kingdom be created without recording its' activities, changes and growth to mark historical highlights? How can we then look back and learn from our experiences and envision a future path?

Our Mission

I. Helping RChain become better.
   A. We will freely discuss all types of governance models with our investors and research them in depth.
   B. We will always give first priority to the technological development of RChain.

II. Record the historical track of investors' suggestions and voices.
   A. We will put each heated argument to a vote in the DAO tool to assess the majority view in the market.
   B. We will be most open to discuss every possibility. The greatest decisions often emerge from collective wisdom.

III. Support the ecological development and construction of RChain.
   A. RChain's ecosystem should not just be built by CO-OP, we should flourish and create DApps freely like other public chains. Then we can protect most of the CO-OP's resource use on mainnet construction.
   B. Let the professionals do the professional thing, let the division of labor be more clear, and let both the CO-OP and the community have clear and well-defined tasks.
   C. Let's push for a better way of cooperation and real progress together. We will gather the most intelligent investors together to determine how RDAO's funds can best be used for RChain.

Our Vision

I. RDAO will move to RChain as more of RChain's mainnet matures, becoming the most open DAO governance platform on RChain.

II.   RDAO will protect RChain's technology forever. And help promote and expand RChain's technology.

III.   RDAO will help RChain find and invest in the most promising DApps. At the same time, RDAO will discover more excellent development talents in the community.

IV.   RDAO will help RChain open the portal for building the metaverse. It also helps that RChain is always connected to trending topics.

V.   RDAO will help RChain to have more external cooperation resources and become a diplomat to connect CO-OP.
